A U T O M A T I O N
YOUR MACHINE VISION PARTNER

Basler's vision solutions offer the high resolution and fast image transmission rate required for pharma critical applications like labeling & packet content match, package inserts, quantities are correct, or defects are present. Quality control is most important including inspection for completeness, dimensional accuracy.

Verify product labels

Basler cameras can verify multiple product labels simultaneously.

Serialization

Bottle Serialization

Inspecting correct label and print as per GS 1 Standards on bottles.

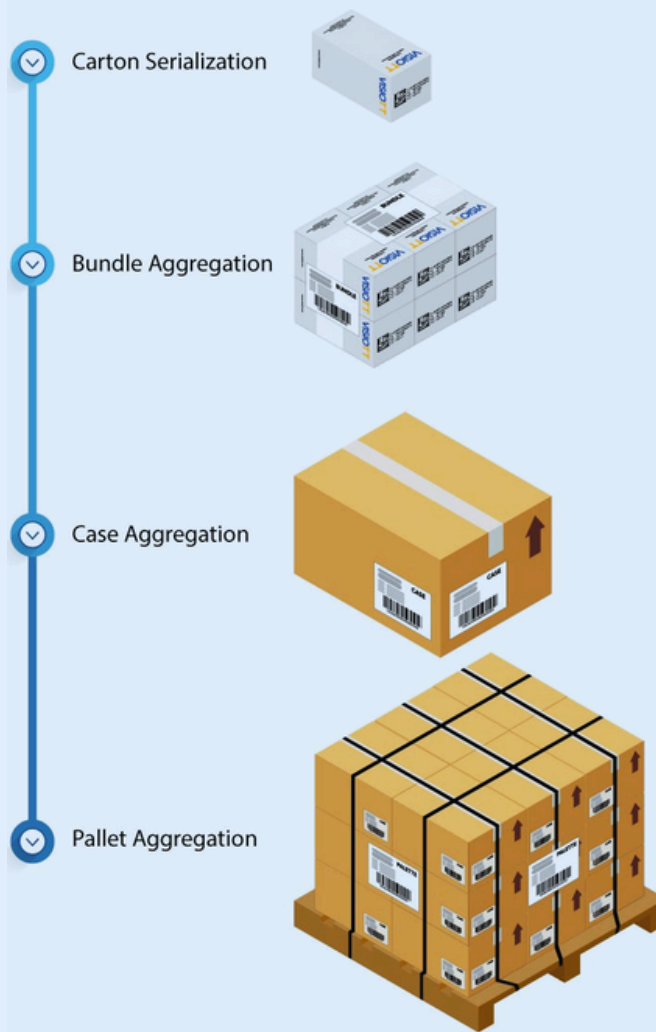

Carton Serialization

Inspecting unique serial number cartons to fulfil regulatory compliances.

Aggregation

Basler cameras find it's unique place in the Semi-Automatic Pack Stations where Camera inspects the printed codes on carton/bottle (e.g,- 12/24/48..) and generate an aggregation label for good ones. Aggregation label is further inspected by camera for correctness.

Palletization

Basler cameras scan the cases / shippers in defined numbers and upon completion, signal for pallet label is provided which in turn scanned for correctness.

Blister Inspection System

Basler provides the state-of-the-art cameras for Blister inspection as a quality assurance process to check for visual defects in tablets and capsules within blister packs. It can be used to verify different aspects like- Color, Half Tablet, Broken Tablet, Hairline crack, Discolor, Wrong Products, Empty pockets, Coated/uncoated tablets, foreign products etc.

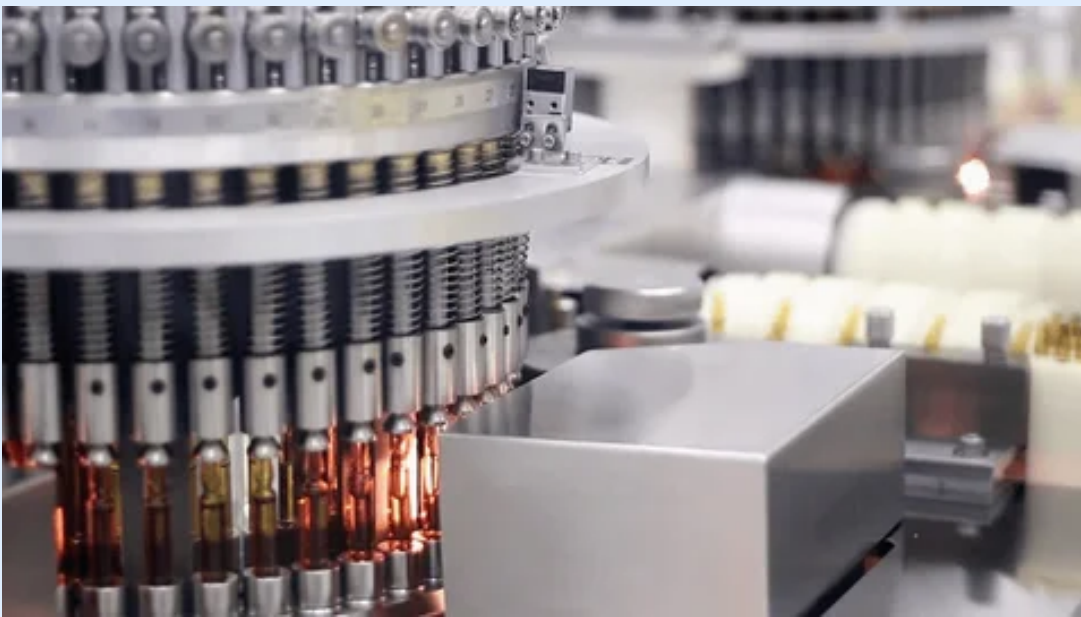

Basler cameras in Blister inspection systems can examine every detail of the blister packaging, from the smallest component to the most intricate structure.

Count & Inspect System

Basler cameras are used by many global OEM's to inspect labels on Ampoules and count them for correct count in a tray. Syringes are inspected for Rubber Stopper, Cap & Plunger color as well presence of these components.
